**LaneAdmin
Remote Monitoring Software**

- TCP/IP Based Application • Control & Monitor Turnstiles from Any Device

Control your EZ Lane SL2000 remotely from any device

The LaneAdmin Remote Monitoring Software is a browser-based software that allows you to take control of virtually all the day-to-day operational functions of our EZ Lane SL2000 optical turnstile. Whether you use a laptop, PC, or tablet, our LaneAdmin allows you to remotely control your SL2000 seamlessly.

Using any networked device with LaneAdmin installed, you can easily change lane configurations, designate certain lanes for entry/exit, open lanes at will for one-time access to guests, perform diagnostics, display patron counts, and much more. LaneAdmin also provides immediate visual notification of alarm conditions: identifying the specific lane, time of the alarm, and the specific alarm condition encountered.

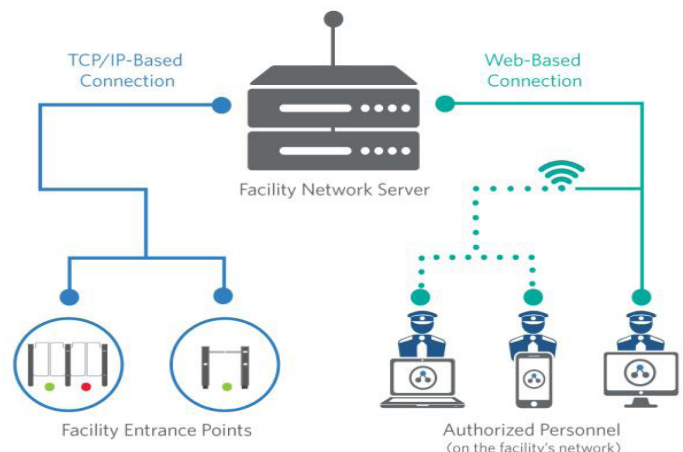

LaneAdmin software also includes an Event Scheduler that automates your turnstile configuration change process. This is great for facilities where traffic flows change on a schedule like regular shift changes or any other easily-predictable traffic flow changes. Intuitive templates come standard for you to either use right away or build upon as you get more familiar with your facility's particular traffic flow.

Reports (Excel, CSV, PDF) are also easily extractable with LaneAdmin, allowing you to analyze turnstile activity like alarm conditions and traffic flows to get the best out of your turnstile access control system.
