# Full Height Turnstiles

## Definition

### What is a Full Height Turnstile?

Full Height turnstiles are larger, tougher and offer greater security when compared to waist high turnstiles. These models are around 8 feet tall and operate similarly to a revolving door – but only allowing access to only one person at a time. Their secure design eliminates the possibility of individuals jumping over or crawling under them. A full height turnstile can be used for single direction or bi-directional applications and can be manufactured to custom widths.

# NEW

## Introducing: Optional Two-Tone Powder Coating

Great for branding and aesthetically "softening" the look of your full height turnstile. Whether you want to match your current design, resonate with your logo colors, or just make a statement with your full height turnstile array, we got you covered.

At no additional cost to regular powder coating, our two tone high-gloss powder coating is one of the Hayward team's latest efforts toward making turnstiles a part of your facility--not an after thought.

Applicable for: HT431, HT431T, HT440, HTG-M

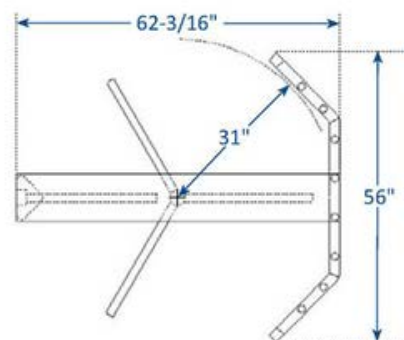

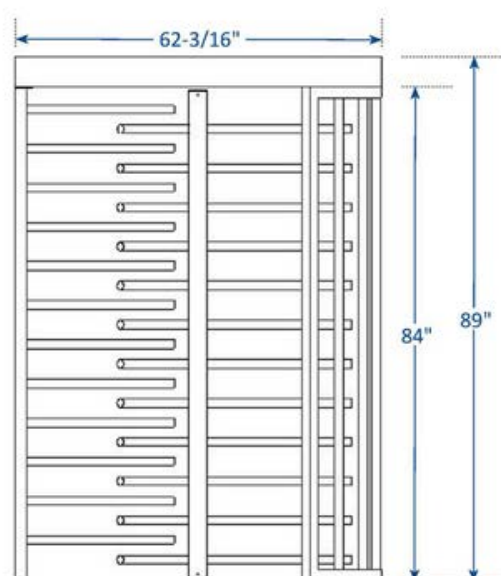

# HT431 Standard Passage

## Featured Product

- Competitively priced
- Comfortable 31" lane width
- Durable and low maintenance
- Comes with 3 free Safety Sleeves
- Matches our HTG-M Gates
- Indoor or outdoor use
- 3 free safety sleeves included

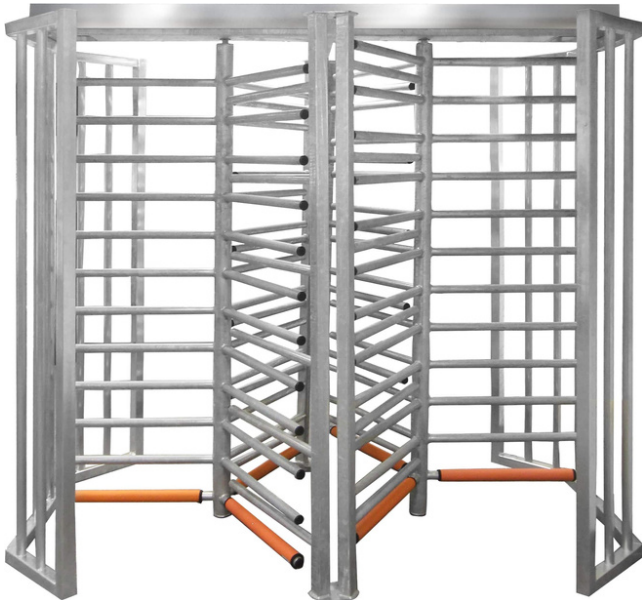

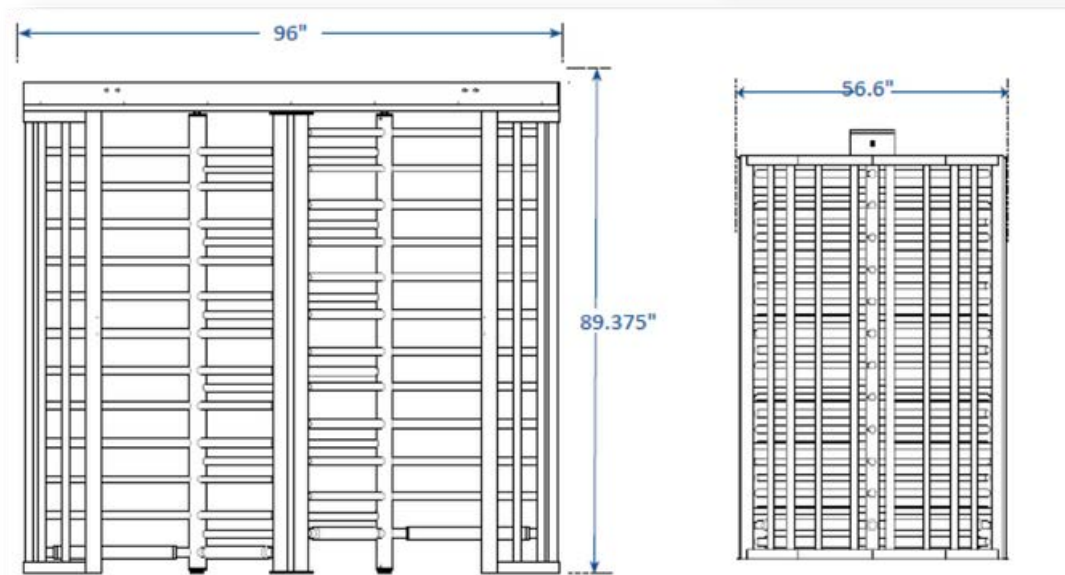

# HT431T Tandem Passage

## Featured Product

- Competitively priced
- Comfortable 31" lane width
- 2 lanes of access in one turnstile
- Comes with 6 free Safety Sleeves
- Matches our HTG-M Gates
- Indoor or outdoor use
- 6 free safety sleeves included

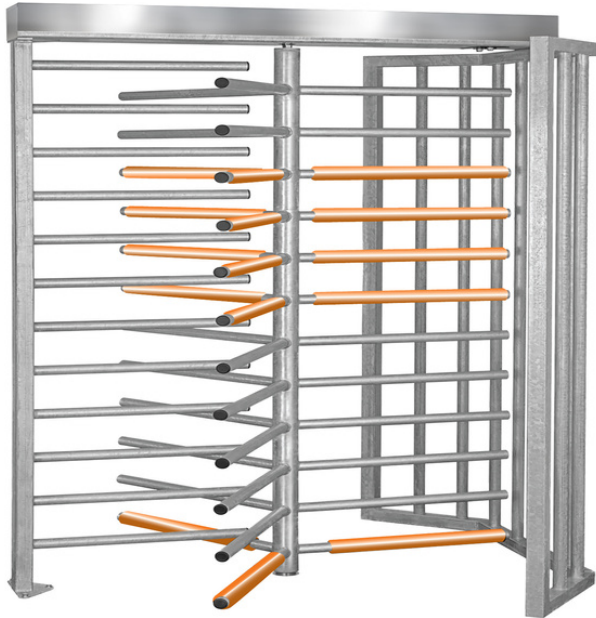

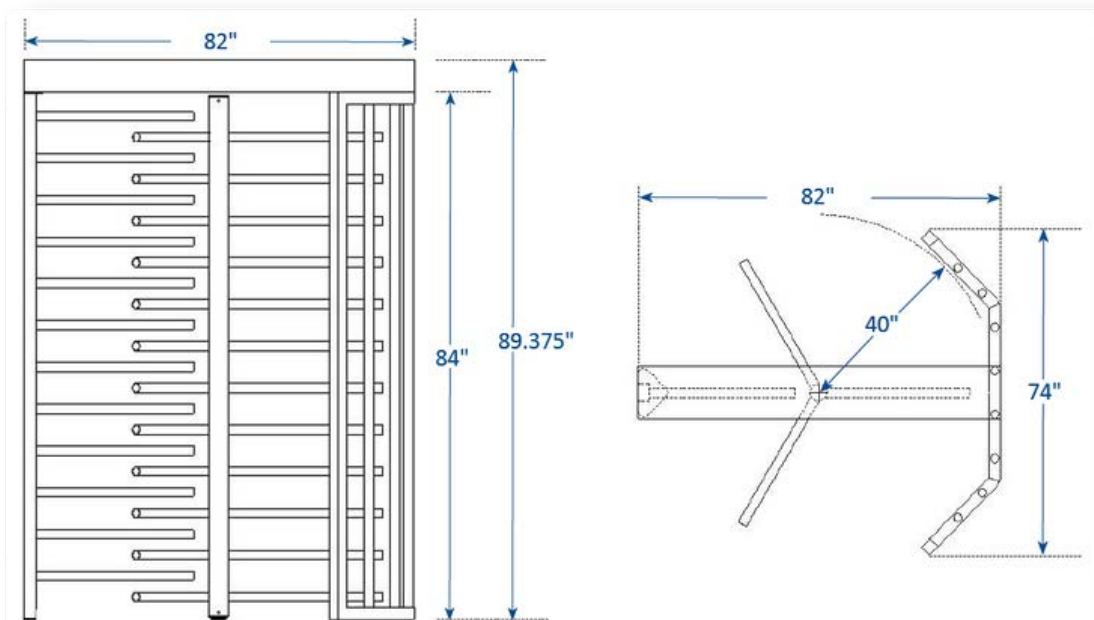

# HT440 Wide Passage

## Featured Product

- Competitively priced
- Extended 40" lane width
- Durable and low maintenance
- Comes with 3 free Safety Sleeves
- Matches our HTG-M Gates
- Indoor or outdoor use
- 3 free safety sleeves included

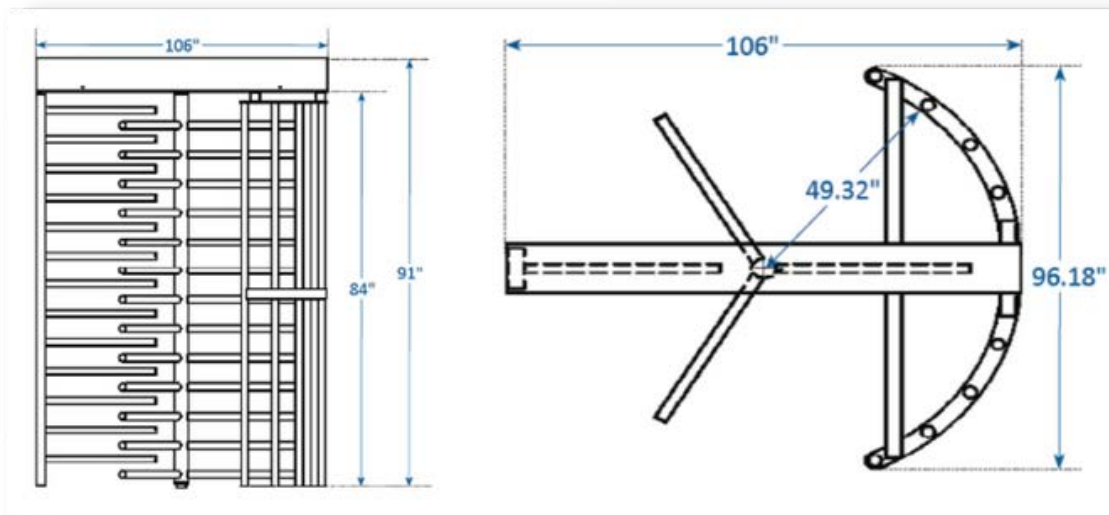

# HT448 Extra Wide

## Featured Product

- Competitively priced
- Extra wide 48" lane width
- Also available in stainless steel
- Matches our HT336 and HT348 ADA gates
- Indoor and outdoor use

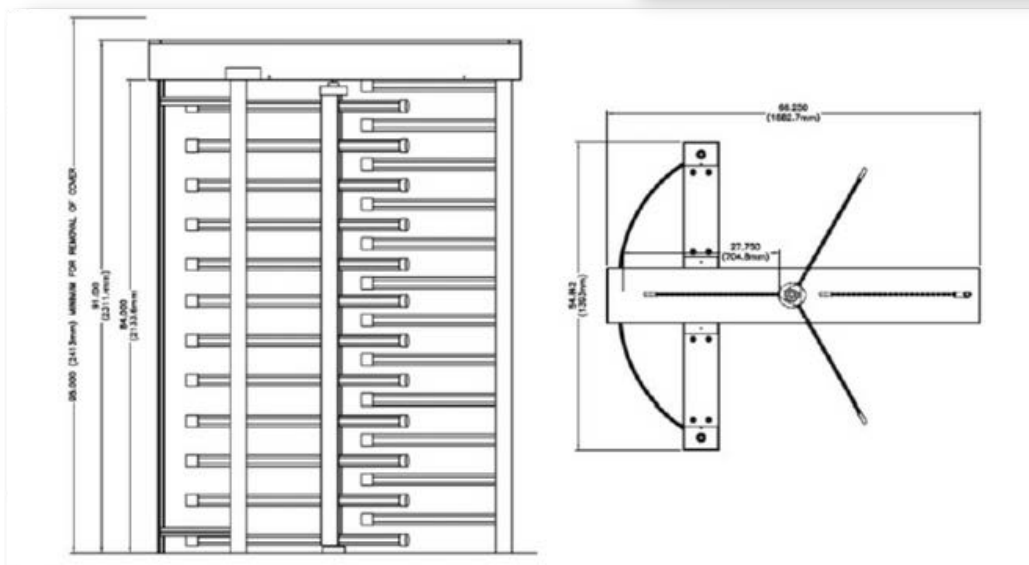

# HT80 Premium Aluminum

## Featured Product

- Competitively priced
- Premium aluminum and polycarbonate materials
- Matches our HT460 ADA Door
- For indoor or outdoor use
- Also available in a tandem orientation

# Full Height Turnstile Safety Sleeves

## Featured Product

- Helps absorb impacts and prevent injuries
- Easy zip-on installation
- Keeps turnstile arms cool in summer heat and insulated in winter conditions

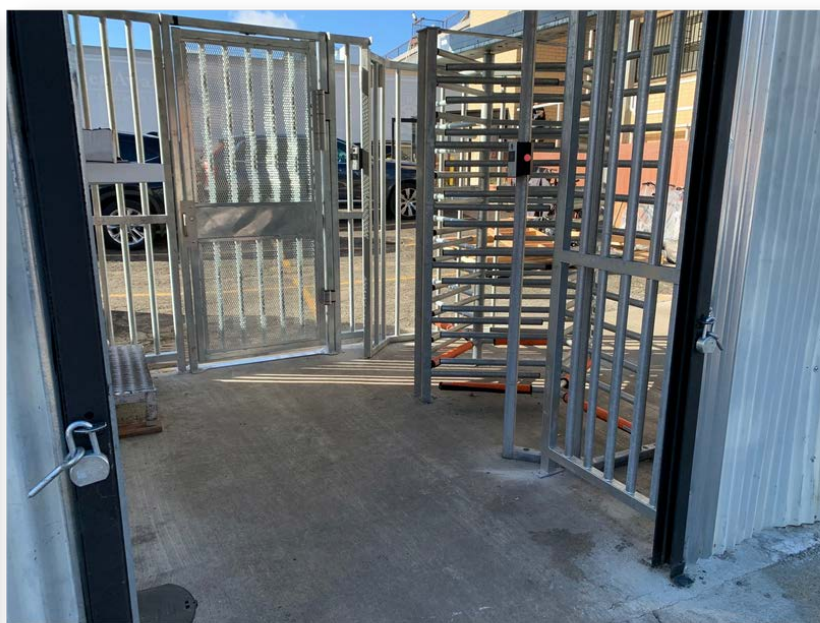

- Weather proof for indoor and outdoor use
- Choice of safety orange or gray
- 1.5" or 1.75" diameter sizes available

# What is a Full Height ADA Gate?

Full height ADA gates are handicap accessible entry solutions that are often found next to a full height turnstile. They function similar to a door, but often have integrated access control aspects like electric strike locks, closers, and panic bars. Full height ADA gates are perfect for use in fence lines, alongside turnstiles, or as emergency exits.

# HT348 Wide Passage Gate

## Featured Product

- Multiple finishes available
- Extended 48" ADA compliant lane width
- Can come with vertical pickets or mesh infill
- Built for indoor or outdoor use

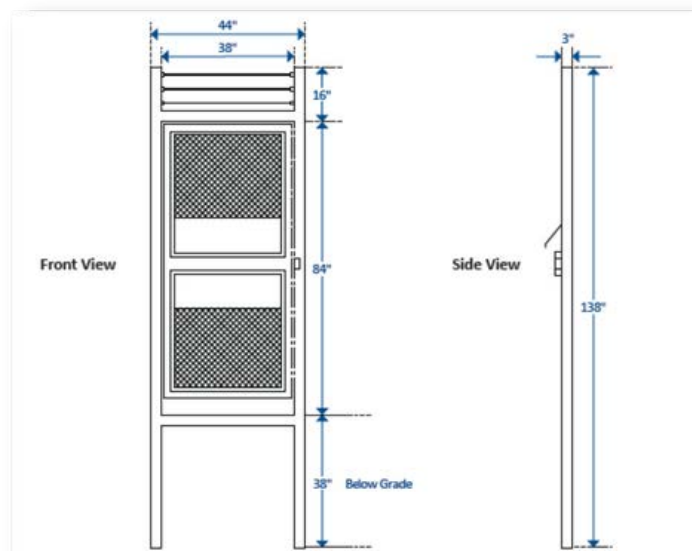

# HTSG High Security Gate

## Featured Product

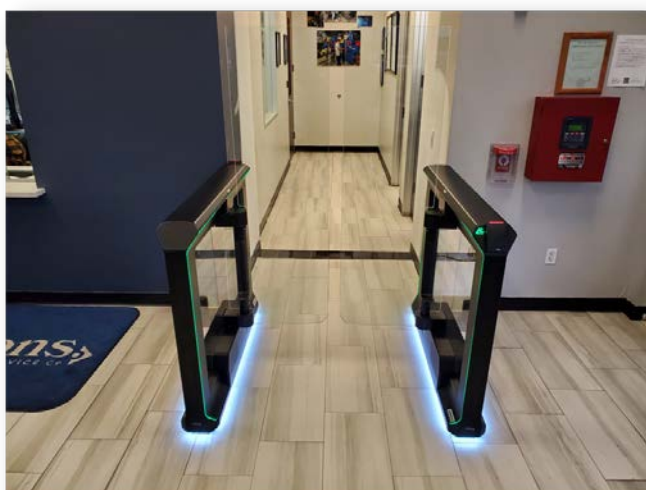

- Highest level of entrance security in a swing gate
- Highly customizable dimensions and features
- Built for high security and extreme environments

## What is an Optical Turnstile?

Optical turnstiles are advanced entrance security devices that utilize optical beam technology to detect when a user has passed through the optical turnstile lane. Often, these optical beam arrays are accompanied by glass, acrylic, or metal arm barriers that open automatically when a user is allowed to make passage. Optical turnstiles provide the strongest defense against tailgating and unauthorized entry without sacrificing aesthetic appeal. They are often constructed of high-grade materials like brushed stainless steel, acrylic, and advanced polyurethane.

## What is a Waist High Turnstile?

Waist High turnstiles are turnstile models with three arms (hence the occasional use of the name “tripod turnstile”) that are approximately 39 inches tall (about waist height for the average individual). These turnstiles provide the perfect height for pedestrians to push through with ease. Multiple waist high turnstiles can be used in series to create an entry border. Waist High turnstiles are the economical choice for a variety of applications, including use at stadiums, amusement parks, office lobbies, and universities.

- Premium Solid Surface lid in your choice of finish
- Matches our MR200 ADA gate
- For indoor or outdoor use
- Great for higher-end office buildings and plazas
- Tamper-proof double-wall design

## What is a Waist High ADA Gate?

The Americans with Disabilities Act (ADA) is a federal civil rights law that prohibits the exclusion of people with disabilities from everyday activities. Businesses with regular turnstiles exclude people with disabilities unless accessible passage options are provided. This can be accomplished with the use of a swing gate or an optical turnstile with an ADA compliant lane width of at least 32 inches. Pedestrian turnstile systems should be designed with handicap access in mind.
