NEW AND IMPROVED ARC Turnstile Mechanism

Leading the way in turnstile innovation, Hayward is proud to introduce our new ARC (Automatic Rotational Control) full height turnstile mechanism—setting a new standard as the most durable and feature-packed turnstile control head on the market.

**USA
MADE**

WHY THE CHANGE?

Our goal has always been to provide our customers with the best and most dependable entrance solutions at realistic prices. As technology improves, we want to make sure our turnstiles do too. That's why we developed our ARC mechanism so our customers could enjoy a long-lasting, low-maintenance turnstile that they could easily integrate with their access control systems. This new mechanism also reduces failure rates due to misuse/hard use, resulting in fewer repairs and lower lifetime ownership costs.

WHAT'S NEW?

- ✓ **Field Reversibility:** easily change your turnstile configuration on the fly if your access control needs change over time. No need to send to Hayward for reconfiguration.
- ✓ **Comprehensive Speed Control:** our ARC speed controller ensures a safe rate of turnstile arm rotation throughout the entire rotation, reducing risk of misuse and damage.
- ✓ **Reinforced Locking Components:** coupled with our comprehensive speed control, these beefed up locking components make our turnstiles virtually unbreakable.
- ✓ **Enhanced Power Supply:** a larger, stronger power supply output allows you to now power neighboring ADA gates and electronics right from the turnstile power supply.
- ✓ **Dedicated Inputs and Outputs:** making integration easier than ever. Dedicated inputs for fire ensures simple integration with life safety systems.
